

REPORT **MAPPING OF CLIMATE FINANCE FLOWS** TO ECOWAS-CILSS ZONE

Multilateral Public Funding

This guide is published by the ECOWAS Department of Agriculture, Environment and Natural Resources

This publication has been produced with financial support from the European Union, under the Intra-ACP GCCA+ programme.

Expertise France supervised the technical preparation of this report for the benefit of ECOWAS and its member states.

CREDITS & CONTACTS

Déthié Soumaré NDIAYE, Climate Finance Expert, GCCA+ West Africa prject, Expertise France

Following experts have also been involved in the preparation work for the report:

- Alain S. Traoré, Director of Agriculture and Rural Development, ECOWAS Commission,
- > Johnson Boanuh, Director of Environment, ECOWAS Commission,
- Bernard Yao Koffi, PPO Environment and Climate, Directorate of Environment, ECOWAS Commission,
- Raoul Konan Kouamé, Climate Change Project Coordinator, Directorate of Environment, ECOWAS Commission,
- > Vanessa Laubin, International climate consultant, on behalf of Expertise France,
- Matthieu Wemaere, Senior Lawyer specialized in environment and climate law and policy, international climate consultant, on behalf of Expertise France,
- Pierre Haas, Technical Advisor, Department of Agriculture, Environment and Natural Resources, ECOWAS Commission,
- ▷ Ibila Djibril, Chair of the Adaptation Fund Board,
- Mahamat Abakar Assouyouti, Senior Climate Change Specialist, Adaptation Fund Board Secretariat,
- > Aya Mimura, Financial Analyst, Adaptation Fund Board Secretariat,
- Daouda B. O. Ndiaye, Lead Adaptation Specialist, Islmaic Development Bank (IsDB),
- Ndiaye Cheikh Sylla, GCF Board member, Chief of staff of the Minister of Environment and sustainable Development, Sénégal,
- > Florence Richard, GCF Regional Adviser, Africa,
- > Amadou Tall, GCF Regional Adviser, Africa,
- Cécile Vivien, Climate Technial Assistant, GCCA+ West Africa prject, Expertise France,
- ▷ Fabris Compaoré, M&E Officer, GCCA+ West Africa prject, Expertise France

Warning: this study concerns the mapping of financial flows to the countries of the ECOWAS-CILSS¹ region, with a focus on resources from multilateral funds (since 2003) on the one hand, with a zoom on the Global Environment Fund (GEF), the Green Fund for Climate (GCF) and the Adaptation Fund; Multilateral Development Banks (since 2015) on the other hand. For resources from multilateral funds, only country financing is analyzed, the available data not making it possible to identify the share of each country in multi-country or even multi-regional financing. The data series generally used for multilateral funds ends in February 2019. For the GCF and the FA, the data used go up to December 2019.

Acknowledgments: Sincere thanks to the following people for their contributions, in alphabetical order according to their membership organization: Aya Mimura, Financial Analyst, Secretariat of the Adaptation Fund (FA); Ibila Djibril, Vice-Chair of the Adaptation Fund Board (FA); Mahamat Abakar Assouyouti, Senior Climate Change Specialist, Adaptation Fund Secretariat; Daouda B. O. Ndiaye, Lead Adaptation Specialist, Islamic Development Bank (IDB); Alain S. Traoré, Director of Agriculture and Rural Development (DADR), ECOWAS; Amadou Tall, Team Leader PESCAO (Improving Regional Governance of Fisheries in West Africa); Bernard Yao Koffi, PPO Environment and Climate, ECOWAS; Konan Raoul Kwamé, Coordinator of the Climate Change Project, ECOWAS; Florence Richard, Regional Advisor for Africa, Green Climate Fund; Ndiaye Cheikh Sylla, Member of the Council of the Green Climate Fund, Director of Cabinet of Minister of Environment and Sustainable Development of Senegal; Vanessa Laubin, International consultant - Climate and territories, PROJECTIONS.

EXECUTIVE SUMMARY

Africa is the region of the world that contributes the least to greenhouse gas (GHG) emissions, yet it is the most vulnerable to the impacts of climate change. In West Africa, the temperature increase is 1.5 times higher than the global level. Climate trends observed over the period 1970-2010 show that: (i) global temperatures have increased, droughts have been recurrent and severe; (ii) rainfall has generally increased; (iii) floods have occurred more frequently and with greater intensity; and (iv) there has been a retreat of the coastline along the West African coastline where the major cities and economic infrastructures are located. Nearly 50% of the region's population derives its income from sectors (agriculture, livestock and fisheries) that are strongly linked to climatic conditions and whose total contribution to GDP is 28% in the CILSS countries and 32% in the region as a whole. All this translates into a high vulnerability of the countries of the region: five of the ten most vulnerable countries in the world are in the ECOWAS-CILSS zone.

The Intergovernmental Panel on Climate Change (IPCC) estimates that limiting warming to 1.5°C rather than 2°C would limit the reduction in yields of maize, rice, wheat and, potentially, other cereal crops, particularly in sub-Saharan Africa. However, this requires rapid and far-reaching transitions in land use, energy, industry, construction, transport and urban planning. These transitions require significant financing to take place.

This report presents the results of the mapping of multilateral climate financial flows to the ECOWAS-CILSS zone. The objective of this study is to provide ECO-WAS and CILSS Member States with complete and accurate information on the resources available to finance climate action, which will enable them to better identify possible sources of financing, plan and coordinate their requests according to their needs at the national level, and have an objective basis for reporting on the financial support required and received to meet their commitments under the international framework for cooperation on climate. This is a first step towards more regular and comprehensive monitoring of climate finance flows to the region and the use of these flows. It shows that multilateral climate finance flows to the region are steadily increasing, with the Least Developed Countries Fund (LDCF) leading the way among donors, followed by the Global Environment Facility (GEF) through its various replenishments (1-6). As of February 2019, financial flows approved by multilateral funds for ECOWAS-CILSS countries (country projects) are estimated at about US\$1.4 billion. Multilateral Development Banks (MDBs) also play a leading role with nearly US\$2.5 billion committed in 2018, representing about 6% of all financing from MDBs and 28% of financing that went to Sub-Saharan Africa. However, these resources still fall far short of the real needs of countries in the region. As an illustration, the financing needs identified in the 2015 nationally determined contributions (NDCs), and this only in terms of greenhouse gas emissions reduction, already represent a financial need of about 340 billion dollars over the period 2015-2030. In addition, the resources needed for the implementation of the NDC of Benin alone are estimated at nearly US\$ 12 billion, more than half of which is expected from development partners. There are also great disparities between countries, with the most vulnerable not always being the best served.

Two funds have marked the evolution of the multilateral climate finance landscape; namely the Green Climate Fund (GCF) and the Adaptation Fund (AF). The AF introduced one of the major innovations of direct access and approved funding to the ECOWAS-CILSS zone in the amount of US\$98.3 million, representing nearly 35% of AF flows to Africa. More than half of these resources (57%) were mobilized through direct (11%) or regional (46%) access. The agricultural sector received the most funding from the AF (46%), followed by disaster risk reduction (20%). The GCF, the main financial instrument of the UNFCCC and the Paris Agreement, has not only adopted the direct access modality, but has also deepened it by introducing the Enhanced Direct Access (EDA) modality. The GCF offers a range of financial instruments to enable the private sector to play a greater role in country climate action: equity investments, concessional loans, guarantees, and grants. To date, the GCF has approved 20 projects, most of them public (11), representing a total budget of US\$3.8 billion, 31% of which are from GCF resources and 69% in the form of co- financing. This shows the importance of co-financing in the GCF strategy, which places strong emphasis on "blended financing" and on the leverage effect of this financing modality. Only about 20% of this amount went to country projects, the rest being allocated to multi-country, even multi-regional projects, which are difficult to analyze from a national or regional perspective. Regional actors agree on the need to rethink the financing strategy for this type of project, giving priority to regional (or even sub-regional) projects, covering countries sharing similar realities and challenges, and ensuring a clear and transparent distribution of resources.

Some countries and organizations have gained experience in mobilizing climate finance. These experiences should be further capitalized and enhanced through regional/South-South cooperation between institutions and countries in the subregion. Beyond the issue of financing mobilization, it would be advisable to analyze the relevance of projects, the extent to which they respond to national needs and priorities and are aligned with country programs and NDCs.

The use of these resources also deserves to be better monitored, in particular through the establishment of more formal and inclusive transparency frameworks.

GCCA+

GENERAL CONTEXT

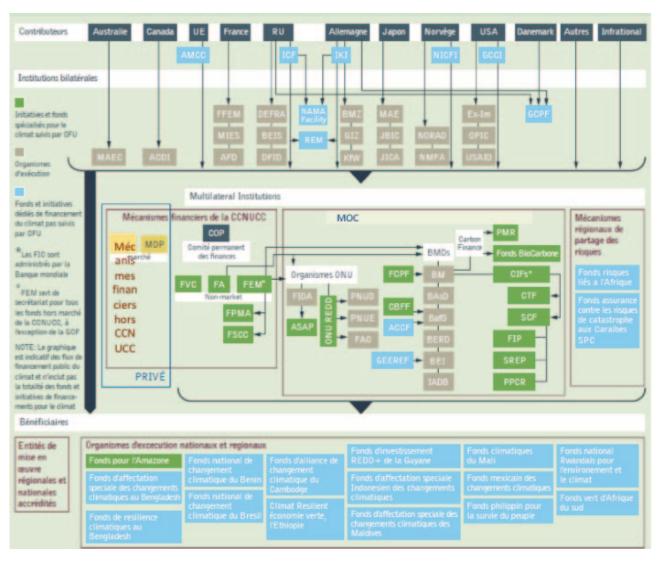

Climate finance refers to the financial resources mobilized to finance actions to mitigate and adapt to the effects of climate change (Watson and Schalatek, 2019 (b)). In the context of international climate negotiations, the concept refers to financial flows from developed countries to developing countries for climate actions which should be new and additional to existing aid flows (Carvalo AP and Terpstra P. 2015). In practice, there is divergence in accounting for interventions where climate action is not the stated objective or the only one, but which contribute significantly to adaptation or mitigation. This is particularly the case for many flood control projects or the rehabilitation of electricity supply services.

The architecture of global climate finance is complex and constantly evolving. Funds are channeled through multilateral channels (inside and outside UNFCCC and Paris Agreement funding mechanisms), and increasingly through bilateral channels, as well as through regional and national climate funds (Figure 1). Multilateral institutions include the financial mechanisms of the UNFCCC (market and non-market mechanisms), mechanisms outside the UNFCCC and regional risk-sharing mechanisms.

Figure 1: Landscape of global climate finance (Source : CFU, 2019)

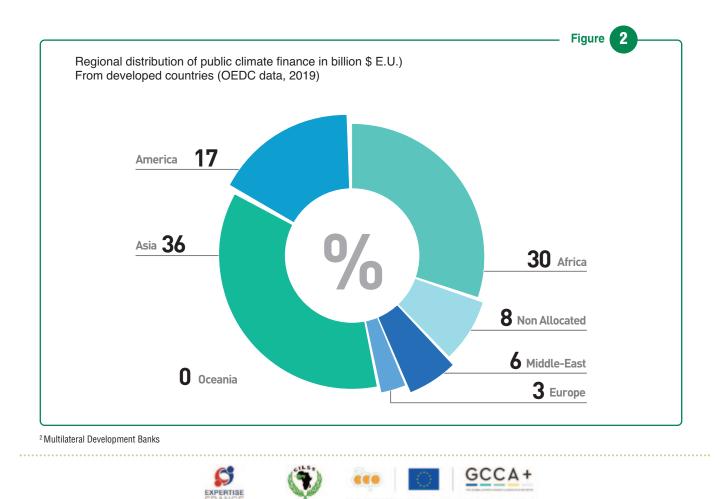

GENERAL CONTEXT

Funding comes in various forms: grants, concessional loans, guarantees and equity. Monitoring flows is difficult, due to lack of an accepted definition of what "climate finance" covers or of uniform accounting rules, in a context marked by a wide variety of financial mechanisms (Watson and Schalatek, 2019 (b))

Climate finance flows at the global level continue to increase, reaching US \$ 463 billion for the period 2015-2016. Although this increase is expected to continue over the next few years, these flows are by far below the resources needed to make the overall transition to low-carbon and climate resilient development. In addition, most of these resources are allocated to mitigation (436 billion), with only 22 billion for adaptation and 5 billion for cross-benefits. Sub-Saharan Africa has received only US \$ 12 billion in funding (CPI, 2018).

Public sources of finance for climate (US \$ 148 billion in 2014) represent only a small part of the more general total finance (US \$ 391 billion in 2014) contributing annually to the achievement of climate goals (CPI 2015) . These funds also have an important role to play in mobilizing additional sources of private capital, including funding from project developers, commercial Financial Institutions, private capital and (sometimes) institutional investors. Thus, the concept of "blended finance" has grown significantly in recent years, with the idea of using public resources in the form of grants, lowcost debt, guarantees and equity to attract private capital. Blended finance is used in most sectors important to achieving climate change goals, including energy, infrastructure and agriculture (Sadler et al., 2016).

Multilateral climate finance (MDBs² and Multilateral Funds) is estimated at US \$ 27.5 billion in 2017 and Africa is the second recipient region, with US \$ 15.9 billion (OECD, 2019), (Figure 2).

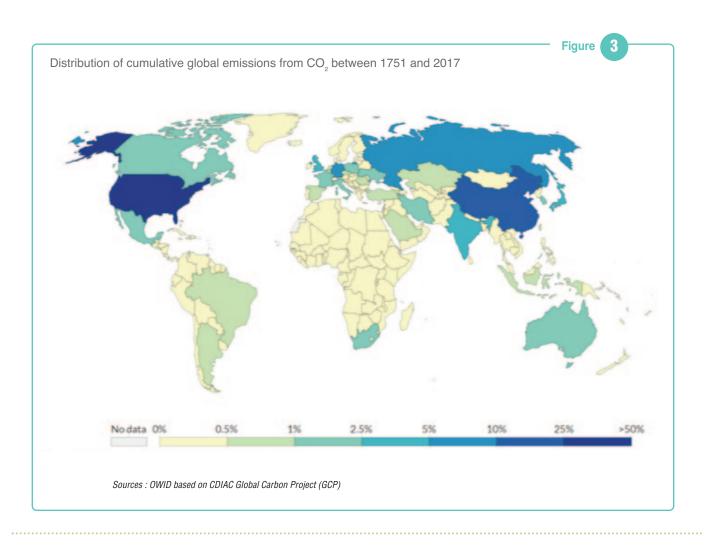

INTRODUCTION

The United Nations General Assembly adopted in September 2015 "The 2030 Agenda for Sustainable Development", built on the vision of a "world free from poverty and hunger, disease and need, where everyone can fully develop." In its paragraph 14, this Program considers climate change as one of the greatest challenges of our time and a unique and crosscutting barrier to this vision, compromising the capacity of all countries to achieve sustainable development (United Nations, 2015). Climate-related risks associated with climate variability and change have compounded food insecurity in many places, particularly in Africa due to the impact of drought, increasing the overall risk of climate-related illness or death (WMO, 2019). Urgent action to combat climate change and its impacts is therefore one of the main objectives of this 2030 Agenda, and the United Nations Framework Convention on Climate Change (UNFCCC) is the main intergovernmental forum for negotiating the content of this action.

Africa is the region of the world that contributes the least to greenhouse gas (GHG) emissions, but it is the most vulnerable to the impacts of climate change (Watson and Schalatek, 2019 (a)). The share of Africa (excluding South Africa) in cumulative global CO emissions between 1751 and 2017 is less than 0.5% (Figure 3). All the countries of the ECOWAS-CILSS zone have an average carbon footprint of less than 1 ton per inhabitant and per year. Countries like Chad and Niger have a footprint of 0.1 tons per year, 160 times less than the United States, Australia and Canada (Ritchie H. and Roser M., 2018).

INTRODUCTION

According to the IPCC 1.5 ° C Report, projections of reduction in food availability are more marked at 2 ° C than 1.5 ° C of global warming in the Sahel, with greater exposure to multiple and complex risks related to climate change and poverty (IPCC, 2018). An increase in the global average surface temperature to 3 ° C, compared to the pre-industrial period, further increases the risk of reduction of agricultural production in Africa and the persistence of heat stress leading to large increases in human morbidity and mortality (Hoegh-Guldberg et al., 2019). In West Africa, the temperature increase is 1.5 times greater than the world level and the main climatic hazards are recurrent droughts, great variability in rainfall and seasons, more and more frequent floods, coastal erosion... (Kairé et al., 2015). In the region, the climatic trends observed during the 1970-2010 period show that: (i) global temperatures have increased, droughts have been recurrent and severe; (ii) precipitation has generally increased; and (iii) floods occurred more frequently and with more intensity (UNEP, 2011). According to the World Bank, 50% of the region's population derives its income from sectors strongly linked to climatic conditions (mainly agriculture, animal husbandry and fishing) and whose total contribution to GDP is 28% in the CILSS countries and 32% across the region (WB, 2009). All of this translates into great vulnerability of countries in the region, as shown by the ND-GAIN³ vulnerability index. The countries of the ECOWAS-CILSS zone display some of the highest levels of vulnerability in the world, with five of the ten most vulnerable countries worldwide being in the ECO-WAS-CILSS zone (Table 1).

Table

List of ten most vulnerable countries worldwide

RANKING	COUNTRY	SCORE
172	Erythrea	0,596
173	Mali	0,609
174	Libéria	0,617
175	Sudan	0,623
176	Guinea-Bissau	0,626
177	Micronesia	0,638
178	Chad	0,651
179	Solomon Islands	0,658
180	Niger	0,67
181	Somalia	0,678

(Data: Notre Dame University, 2019)

³A country's score against the ND-GAIN country index is made up of a score for vulnerability and a score for readiness. Vulnerability measures a country's exposure, sensitivity and ability to adapt to the negative impact of climate change. ND-GAIN measures general vulnerability by taking into account vulnerability in six vital sectors: food, water, health, ecosystem services, human habitat and infrastructure (University of Notre Dame, 2019).

GCCA

According to the Intergovernmental Panel on Climate Change (IPCC), limiting warming to 1.5 ° C rather than 2 ° C would limit the reduction in the yield of crops of corn, rice and wheat and potentially other cereal crops, particularly in sub-Saharan Africa. However, this would require "rapid and far-reaching transitions" in the areas of land use planning, energy, industry, building, transport and urban planning (IPCC, 2018), hence the significant financing needs expressed by developing countries to finance the costs of such a transition. This is particularly the case for the countries of the

ECOWAS-CILSS region which expect to receive from the development partners the bulk of the resources necessary to implement the commitments made through their NDCs.

Climate finance therefore remains an element to be reckoned with for achieving climate change resilient and low carbon development (Watson and Schalatek, 2019 (b)). This is why the Paris Agreement, which entered into force on November 4, 2016, builds on this Convention and brings together all the parties around an ambitious commitment in favor of a paradigm shift towards low carbon and climate resilient development pathways. Among other things, it aims to make financial flows more compatible with this transition to low-carbon and climate-resilient development pathways (Article 2.1 (c) of the Agreement). The Decision adopting the Paris Agreement highlights the ambition to annually mobilize US \$ 100 billion until 2020 for climate, in favor of developing countries. A new collective quantitative target will be defined before 2025.

OBJECTIVES AND METHODOLOGY

3.1. OBJECTIVES

The objective is to regularly provide ECOWAS-CILSS Member States with complete, accurate and updated information on the resources available to finance climate action, which will enable them to better identify possible sources of financing, plan and coordinate their requests according to their needs at the national level, and have an objective basis for reporting on the financial support needed and received to meet their commitments under the international framework for climate cooperation.

This monitoring of financial flows is intended to:

- decision-makers, at regional and national levels, as a snapshot of the region or country in terms of mobilizing climate funds. It will help to identify performance in this area, but also weaknesses to be corrected at different levels. It will also be useful in assessing the level of implementation of NDCs, including their conditional options;
- "transparency actors" such as civil society, the press, community organizations, producer organizations, etc., as well as the media. They will have access to information on the resources mobilized and their use;

- researchers interested in the issue of climate financing, by giving them a regional perspective (ECOWAS- CILSS zone) on needs and challenges.

Besides this analytical report, an online compendium is also produced giving access to more details and allowing more targeted analyses, from different perspectives.

3.2. SOURCES AND METHODOLOGY

Monitoring financial flows is challenging, due to the great diversity of mechanisms, but above all the absence of a harmonized and global reporting system on financing. This work is mainly based on data collection and litterature review.

The main sources of data used are:

- Climate Finance Update4: this is an independent web platform that provides information and data on multilateral climate finance initiatives to help developing countries meet the challenges posed by climate change. It is a compilation of official data from multilateral funds5, on climate finance announced and approved. CFU tracks key funds governed by multilateral mechanisms related to climate change, many of which are linked to the UNFCCC Convention. CFU data have been cumulative since 2003. Climate Funds Update is administered by the Heinrich Boell Foundation (HBS) and ODI (Overseas Development Institute).
- The annual joint report on climate finance for multilateral development banks: this is a joint report, prepared each year since 2011 by a group of multilateral development banks (MDBs), composed of the African Development Bank, the Asian Development Bank, the European Bank for Reconstruction and Development, the European Investment Bank, the Inter-American Development Bank Group, the Islamic Development Bank and the World Bank Group. It aims to make climate finance figures for the MDBs available to the developing and emerging countries.

For the focus on the GEF, the Green Climate Fund (GCF) and the Adaptation Fund (FA), the data used were collected from the websites of these Funds.

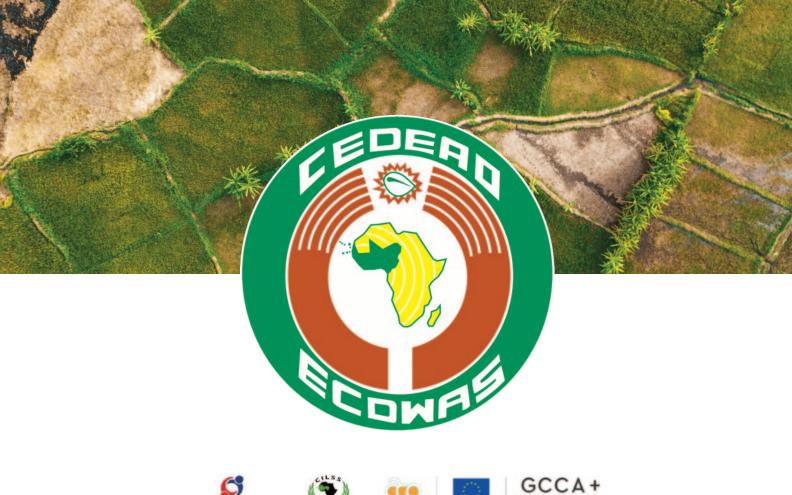

Data for the 17 countries of the ECO-WAS-CILSS zone are collected and processed, essentially using the Excel tool, to produce visualizations (graphs and diagrams) serving as the basis for the analyzes.

In addition, various reference publications on the subject have been used for context. This is the case, among others, of those of the CPI (Climate Policy Initiative), HBS (Heinrich Boël Stiftung), and the OECD (Organization for Economic Cooperation and Development).

⁵ Fund sites; official reports to international organizations by funds and by contributing organizations; and documents such as press releases, key decisions made at conferences or meetings, information from civil society organizations.

4.1. FINANCING FROM MULTILATERAL FUNDS

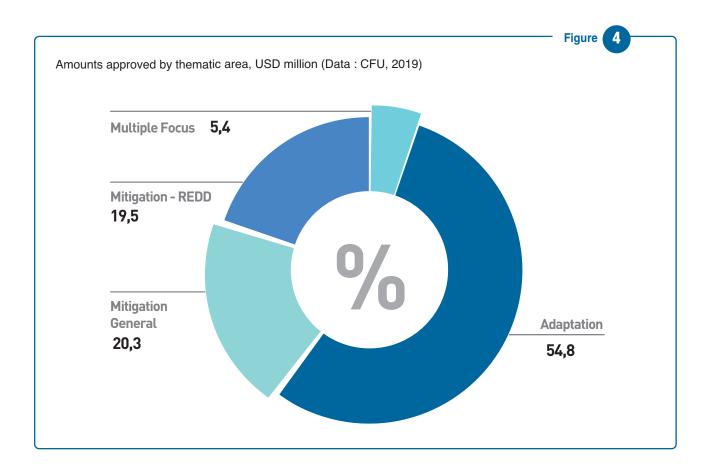

In 2017, multilateral climate funds approved almost US \$ 2 billion for 152 projects across 70 countries. The Green Climate Fund (GCF) alone accounts for half of these approvals, or US \$ 1 billion (Watson et al., 2017).

Almost a quarter of the funding approved (23%) for the period 2003-2017 was allocated to sub-Saharan Africa, of which 75% in the form of a grant (Watson et al., 2017).

Financial flows from approved multilateral funds allocated to the countries of the ECOWAS-CILSS region are estimated at around US \$ 1,377 million⁶, from 2003 to February 2019. More than half of these resources (almost 55%) were used to finance adaptation actions, around 40% for mitigation and 5% for multiple areas⁷ (Figure 4).

In February 2019, nearly 40% of the funds approved for adaptation were disbursed, almost 29% for mitigation in general, 34% for REDD⁸ mitigation and slightly less than 11% for multiple thematic areas (Figure 5). The first recipient country in the region is Niger, followed by Burkina Faso and Mali. Guinea and Sierra Leone, which are among the ten most vulnerable countries in the world (Notre Dame University, 2019), received the least funding (Fig 6).

This funding comes from fourteen financial mechanisms, with the Least Developed Countries Fund (FPMAs) leading, either in terms of approved funding or in terms of disbursed funds (Figure 7). The full list of projects funded by country in the region is presented in Annex 1.

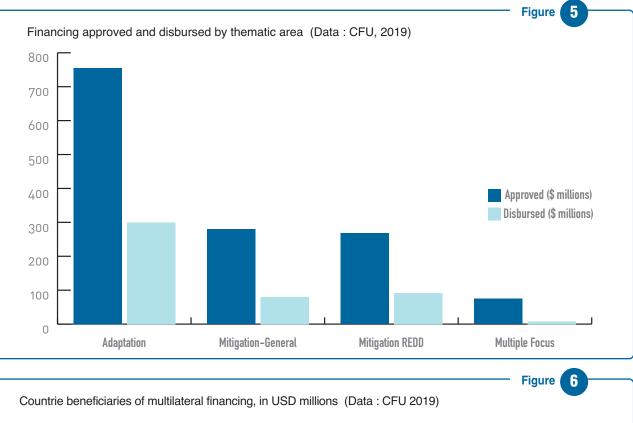

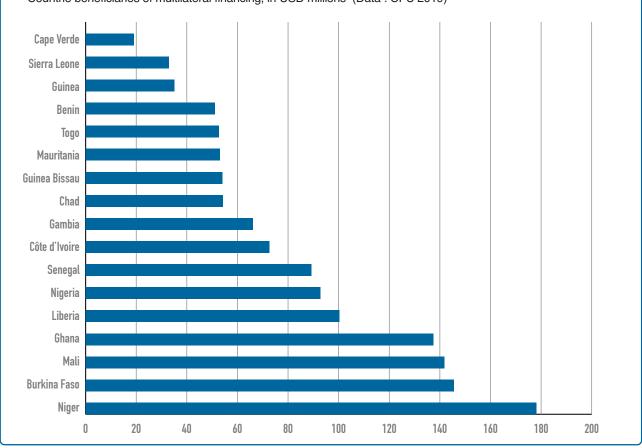

⁶ These are only country financings

⁷ Adaptation and mitigation

⁸ REDD (Reducing Emissions from Deforestation and Forest Degradation) aims to create financial value for carbon stored in forests, by encouraging developing countries to reduce emissions from forest land and to invest in low carbon solutions leading to sustainable development. "REDD +" goes beyond deforestation and forest degradation and includes the role of conservation, sustainable forest management and improvement of forest carbon stocks (UN-REDD Program, 2009

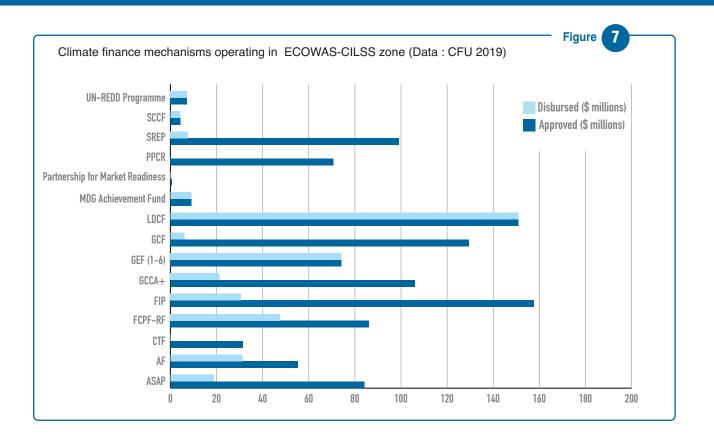

GC

4.2. FUNDING FROM THE GOBAL ENVIRONMENT FUND

The GEF was established in 1991 in response to the global environmental challenges of the previous decade. It operated in a pilot phase until mid-1994, before being restructured at a meeting of GEF participants in Geneva in March 1994, at which representatives of 73 States agreed to adopt its financial instrument. The GEF's organizational structure includes an Assembly that meets every four years, a Council that meets twice a year, a Secretariat, and the Scientific and Technical The GEF was established in 1991 in response to the global environmental challenges of the previous decade. It operated in a pilot phase until mid-1994, before being restructured at a meeting of GEF participants in Geneva in March 1994, at which representatives of 73 States agreed to adopt its financial instrument. The GEF's organizational structure includes

an Assembly that meets every four years, a Council that meets twice a year, a Secretariat, and the Scientific and Technical Advisory Panel. The main decision-making body of the organization is the GEF Council, which is responsible for developing, adopting and evaluating its operational policies and programs. It is composed of 32 appointed members, each representing a constituency9. The GEF serves as a financial mechanism for a number of multilateral environmental agreements, the United Nations Convention on Biological Diversity (CBD), the UNFCCC, the Stockholm Convention on Persistent Organic Pollutants and the United Nations Convention to Combat Desertification (UNCCD). The GEF is a trust fund to finance the incremental costs of actions to protect the global environment, whether undertaken by public or private initiatives, in developing countries and countries with economies in transition.

It is funded by donor countries, which commit funds every four years through a process called "GEF replenishment". Since its inception in 1991, the GEF Trust Fund has been replenished with \$2.75 billion (GEF-1); \$3 billion (GEF-2); \$3.13 billion (GEF-3); \$3.13 billion (GEF-4); \$4.34 billion (GEF-5); \$4.43 billion commitment for GEF-6; \$4.1 billion commitment for GEF-7. As of November 2018, more than 1,000 projects had been approved in the area of climate change, for a cumulative amount of US\$ 3.6 billion.

GEF-7 covers the operations and activities of the GEF for the period 2019 to 2022, with programming organized around 5 focal areas, each of which is aligned with the conventions and multilateral environmental agreements (MEAs) for which the GEF acts as a financial mechanism: Biodiversity, Climate Change, International Waters, Land Degradation, Chemicals and Waste. The allocation for

⁹ Group of countries comprising both donors and recipients

the climate change focal area is US\$511 million, down from previous replenishments, mainly due to the resources drained by the GCF as the main financial instrument of the UNFCCC.

The allocation of these resources to countries is based on the Transparent Resource Allocation System (STAR), which determines the minimum amount of GEF resources that a given country can access during a replenishment period. The STAR is a system for allocating resources to countries in a transparent and consistent manner, based on global environmental priorities and national capacities, policies and practices relevant to the successful implementation of GEF projects.

The GEF also implements corporate programs that aim to build the capacity of recipient countries and civil society organizations (CSOs) to effectively protect the global environment. Under GEF-6, two corporate programs are implemented: the Small Grant Programs (SGP) and the Country Support Program (CSP). These two programs are expected to continue and be strengthened through GEF-7.

GEF funding is channeled to recipient countries through eighteen accredited entities .

The GEF's portfolio¹¹ of country projects in the ECOWAS-CILSS region consists of 72 country projects with a cumulative total of nearly US\$ 167 million, of which US\$ 74 million has been disbursed. These projects are channeled through 9 GEF agencies: FAO, ADB, UNEP, World Bank, UNDP, UNIDO, IFAD, WADB and IUCN.

The GEF also administers two special funds focused on financing climate change adaptation and technology transfer activities, the Special Climate Change Fund (SCCF) and the Least Developed Countries Fund (LDCF). The operational policies, procedures and governance structure of the GEF apply to these funds, unless otherwise decided by the COP and the LDCF/Special Fund Council (the main governing body). The GEF Agencies are the operational arm of the GEF.

The Special Climate Change Fund (SCCF) was established in 2001 under the UNFCCC to finance climate changerelated activities, programmes and measures to accompany those financed from resources allocated in the GEF climate change focal area and from bilateral and multilateral funds.

The Special Fund is expected to have four different funding windows: Adaptation; Technology Transfer; Energy, Transport, Industry, Agriculture and Waste Management; and Economic Diversification for Fossil Fuel Dependent Countries. However, to date, the Special Fund has financed adaptation and technology transfer projects and programmes that: (i) are country-driven, cost-effective and integrated into national sustainable development and poverty reduction strategies; and (ii) take into account national communications or NAPAs and other relevant studies and information provided by the Party. To date, the SCCF has funded country projects in the ECOWAS-CILSS region to the tune of US\$4.2 million.

The Least Developed Countries Fund (LDCF) was established under the United Nations Framework Convention on Climate Change (UNFCCC) at the seventh session of the Conference of the Parties in Marrakech and is managed by the Global Environment Facility. The Fund addresses the special needs of the 49 LDCs that are particularly vulnerable to the adverse effects of climate change. As a priority, it supports the preparation and implementation of National Adaptation Programmes of Action (NAPAs), countryled strategies that identify the immediate needs of LDCs to adapt to climate change.

Any LDC that is a party to the UNFCCC and has established a NAPA is eligible to receive funding for projects under the LDC Fund. Countries included in Annex II¹² to the UNFCCC shall provide funding to the LDCF, as well as some Annex I countries and any non-Annex I¹³ country that wishes to do so.

The cumulative volume of LDCF country financing in the ECOWAS-CILSS zone amounts to nearly US\$336 million.

¹⁰ https://www.thegef.org/partners/gef-agencies / ¹¹ Les projets régionaux et les projets globaux couvrent, en plus des pays de la zone, plusieurs autres pays de la Région Afrique ou du Monde. 4.3 FUNDING FROM MUTILATERAL DEVELOPMENT BANKS

In 2018, Multilateral Development Banks (MDBs¹⁵) pledged to contribute US \$ 43.1 billion - from equity and external resources¹⁶ channelled through them - as climate finance for developing and emerging countries. Almost 70% of these resources are intended for mitigation and around 30% for adaptation (Figure 8). The World Bank Group is by far the largest contributor (Figure 9).

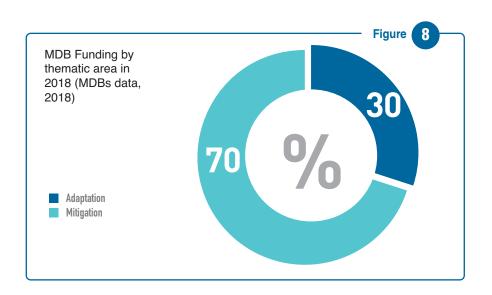

External resources are made up of trust funds such as those financed by bilateral agencies and funds dedicated to financing the fight against climate change such as the Climate Investment Funds (CIF), the Green Climate Fund (GCF) and Climate-related Funds under the Global Environment Facility (GEF), European Union (EU) Mixed Funds and others (MDBs, 2018). The total amount of climate finance from MDBs equity in 2018, amounts to US \$ 40,230 million, with US \$ 2,871 million coming from external resources and channeled through MDBs. Almost 71% of this funding is in the form of loans and only 5% in grant form (MDBs, 2018). Sub-Saharan Africa is the main recipient with US \$ 8.957 billion, or 21% of all funding granted in 2018 (Figure 10). Almost 56% (or US \$ 5.064 billion) of this funding is dedicated to mitigation and 43.5% (or \$ 3.893 billion) to adaptation (BMDs, 2018). These amounts do not include co-financing from other institutions, public or private, and estimated at US \$ 68 billion for 2018. This is largely justified given the situation in the region in terms of vulnerability and contribution to GHG emissions.

The countries of the ECOWAS-CILSS zone benefited from pledges amounting to US \$ 2,493 million in 2018, i.e. around 6% of all funding from MDBs and 28% of funding that went to Africa sub-Saharan.

Over the 2015-2018 period, the first beneficiary countries are, in descending order, Nigeria, Senegal and Côte d'Ivoire. For 2018 alone, the same three countries are still in the lead, Côte d'Ivoire passing ahead of Senegal (Figure 11).

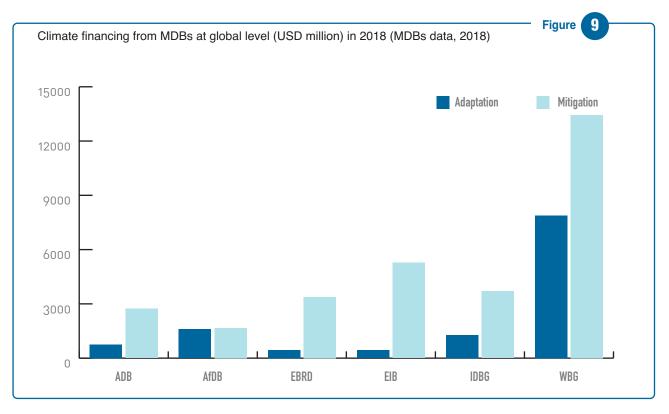

These three countries are among the 4 least vulnerable in the region (along with Ghana), according to the ND-GAIN 2017 vulnerability index (Figure 12). This illustrates the disparities between the 17 countries, but also and above all the paradox that the most vulnerable often have the greatest difficulty in mobilizing climate finance.

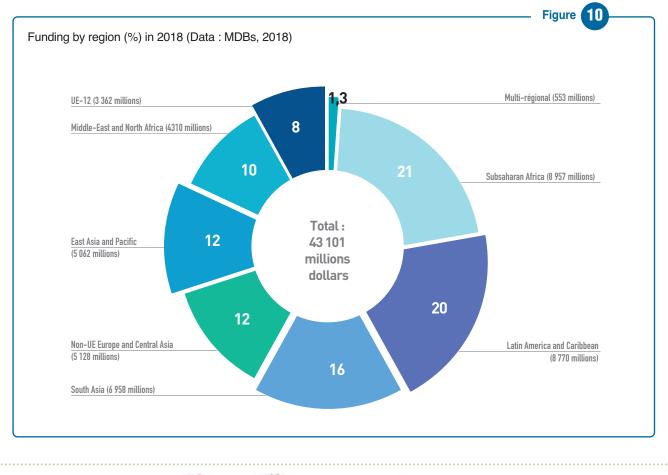

In general, resources remain well below the needs of the countries of the ECO-WAS-CILSS zone. For example, the resources required to implement the NDC of Benin alone are estimated at nearly US \$ 12 billion, more than half of which is expected from development partners.

¹⁵ African Development Bank, Asian Development Bank, European Bank for Reconstruction and Development, European Investment Bank, Inter-American Development Bank Group, Islamic Development Bank and World Bank Group
¹⁶ This partly includes resources from multilateral funds

4.4. GREEN CLIMATE FUND FINANCING FLOWS TO THE ECOWAS-CILSS ZONE

4.4.1. Presentation of the Green Climate Fund

The Green Climate Fund (GCF) was created in 2010 in Cancun (COP 16), and its governing instrument adopted in 2011 in Durban (COP 17). It is the main financial mechanism for the United Nations Framework Convention on Climate Change (UNFCCC) and it also serves the Paris Agreement, in the same way as the Global Environment Facility (GEF) and the Adaptation Fund.

GCF's mission is to promote a paradigm shift towards low-emission and climateresilient development in developing countries and support the implementation of the Paris Agreement, taking into account the specific needs of developing countries particularly vulnerable to the adverse effects of climate change (decision B.12 / 20).

The GCF 2020-2023 Strategic Plan emphasizes the need to implement urgent and transformative solutions in order to limit global warming below 2 ° C compared to pre-industrial levels, to continue efforts to limit temperature increase to 1.5 ° C compared to pre-industrial levels. It also recognizes that it is imperative to invest more in climate to meet the ambitions defined by developing countries in the

Nationally Determined Contributions (NDCs), adaptation plans and national climate strategies, in particular using GCF resources to catalyze financing commensurate with the climate investment needs of developing countries.

The GCF channels its climate funds through a wide range of private, public, non-governmental, subnational, national, regional or international organizations. These, deemed to have a good potential to contribute to climate action, must be accredited by the GCF, i.e. demonstrate that they can comply with GCF requirements in terms of fiduciary management. environmental and social safeguard, as well as gender, with requirements differentiated according to the categories and budgets of projects managed. Once accredited, these organizations can submit climate projects to the GCF and will be responsible for supervising the implementation of these projects, if approved. The accreditation is valid for a fixed term of five years (Decision B.10/07). During this period, the GCF regularly monitors the accredited entity's compliance with the accreditation standards and its obligations. In order to be re-accredited, entities must demonstrate that their performance against the GCF requirements has been maintained or improved, at the risk of losing accreditation or being downgraded to lower categories.

There are two types of accredited entities, depending on the access modalities:

direct access entities and international access entities.

Direct access entities are subnational, national or regional organizations that must be nominated by Designated National Authorities (DNA) or Focal Points (FP) of developing countries. Direct access is an innovative modality designed to allow developing countries to take better ownership of climate finance and better integrate it into their national climate action plans. The list of GCF affiliated NDAs in the ECOWAS-CILSS zone is presented in Annex 2.

International access entities include United Nations Agencies, Multilateral Development Banks (MDBs), international financial institutions, regional institutions and NGOs. The GCF considers that these organizations have the scale and expertise necessary to manage climate change related issues, including when they are trans-boundary and crosscutting. International access entities do not need to be nominated by NDAs / FPs in developing countries.

As of today, there are 38 national direct access entities, 13 regional direct access entities and 37 international access entities (Figure 13). Direct access thus represents the majority of the portfolio of GCF accredited entities (58%), but international access remains predominant in volumes with 81% of funding approved until February 2019, i.e. \$ 4,092 million EU (Watson and Schalatek, 2019 (a)).

GCCA+

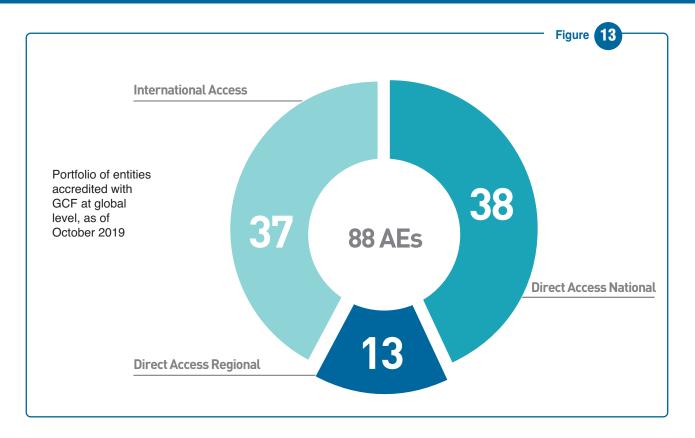

Table 2

Direct access entities of the GCF in Africa (GCF data, 2019)

Name	Country/ HQTRS	Access modality
Agence de Développement Agricole (ADA)	Morocco	Direct National

Banque Ouest-Africaine de Développement (BOAD)	Togo	Direct Régional
Development Bank of Southern Africa (DBSA)	South Africa	Direct Régional
Observatoire du Sahara et du Sahel (OSS)	Tunisia	Direct Régional

The GCF has 50 direct access entities, including 14 located in Africa and only 3 in the ECOWAS-CILSS zone :

- 02 national direct access entities : the Centre de Suivi Ecologique (CSE) of Senegal and the Fonds National pour l'Environnement et le climat (FNEC) of Benin ; and
- 01 regional direct access entity : the West African Development Bank (WADB) based in Togo (Table 2).

The table in Annex 3 presents the list of GCF accredited entities operating in the ECOWAS-CILSS zone¹⁷, with details of their accreditation categories and the status of their GCF project portfolios. The GCF has a "fit-for-purpose" accre-

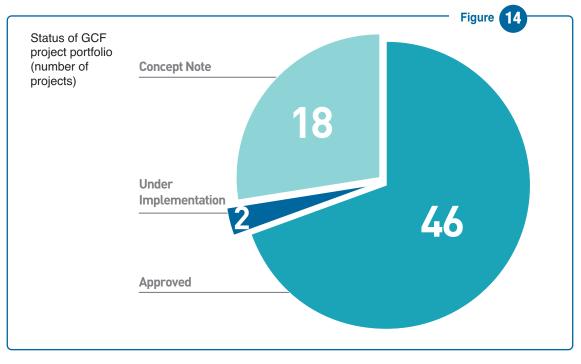

ditation strategy. Entities are thus accredited according to a certain number of criteria, based on their experience and their core business. Project proponents and NDAs should screen these intermediaries before choosing the one that is best suited to the size of the project, the level of environmental and social risk, the targeted financial instruments, but also the sector in which they have the best track-records depending on their mandate.

4.4.2. The porftolio of the Green Climate Fund

During its initial mobilization period (2014-2019), the GCF built at global level a portfolio of 124 projects with a total amount of US \$ 5.6 billion¹⁸, generating a total investment of US \$ 20.6 billion

lion¹⁹ for the climate in 133 developing countries. About 24% of resources were allocated to adaptation, almost 42% to mitigation and 34% to cross-cutting activities (adaptation and mitigation). As of the end of August 2019, 60 projects worth US \$ 2.5 billion were being implemented in the world with GCF resources (GCF, 2019). In 2018, the GCF became the largest donor in sub-Saharan Africa, supplanting the LDCF (Watson and Schalatek, 2019 (a)).

In the ECOWAS-CILSS zone, the GCF project portfolio currently includes 46 concept notes under submission (including 38 country-projects and 8 multicountry projects) and 20 approved projects, including only 2 under implementation (Figure 14).

¹⁷ Accredited entities with projects (concept note or funding prposal) submitted or approved by GCF, as of August 2019

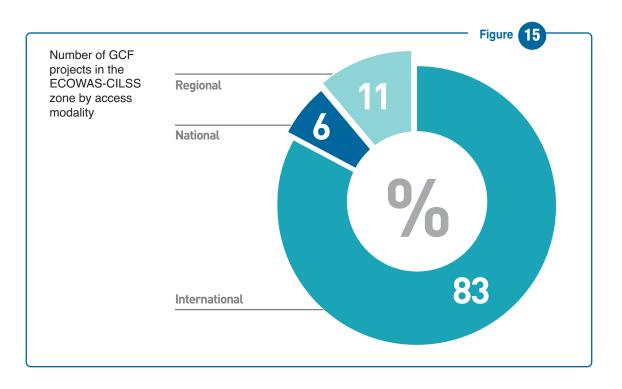

¹⁸ Amounts assigned to projects on GCF equity by the Fund's board until 21 November 2019

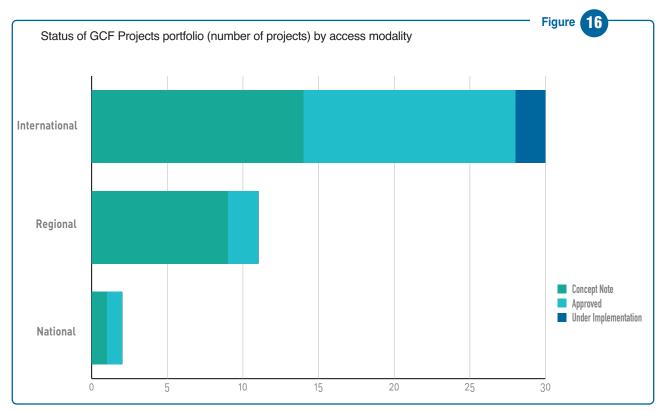

¹⁹ Total of amounts approved for projects, including financing and co-financing

The GCF has fairly rigorous project approval procedures in place. These procedures are regularly evaluated and reviewed with a view to simplification, without sacrificing the requirement for project quality. Similarly, legal post-approval arrangements take time and accredited entities and project sponsors need to be prepared for these delays.

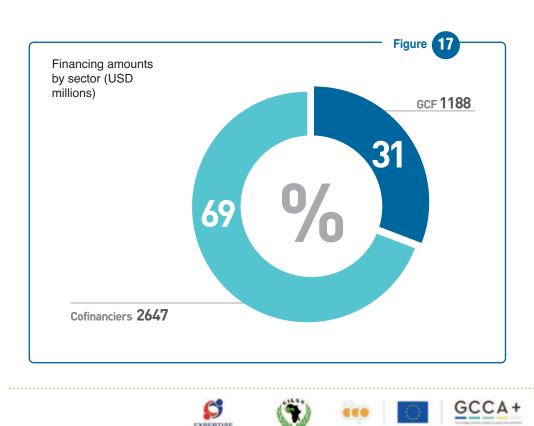

The portfolio in the ECOWAS-CILSS zone is still largely dominated by international access which represents 83% of the projects approved yet, versus 11% by regional direct access, and 6% by national direct access (Figure 15).

This pre-eminence is found at all phases of the project cycle (Figure 16). The 2 projects whose implementation has started to date are operated by 2 international agencies, namely the French Development Agency (AFD) and the UN-Environment Program (UNEP). The 20 projects approved, mostly public (11), represent a total of US \$ 3,8 billion, of which 31% from GCF resources and 69% in the form of co-financing (Figure 17). This shows the importance of co-financing in the strategy of the GCF, which places a strong emphasis on "blended financing" and the leverage effect of this funding modality.

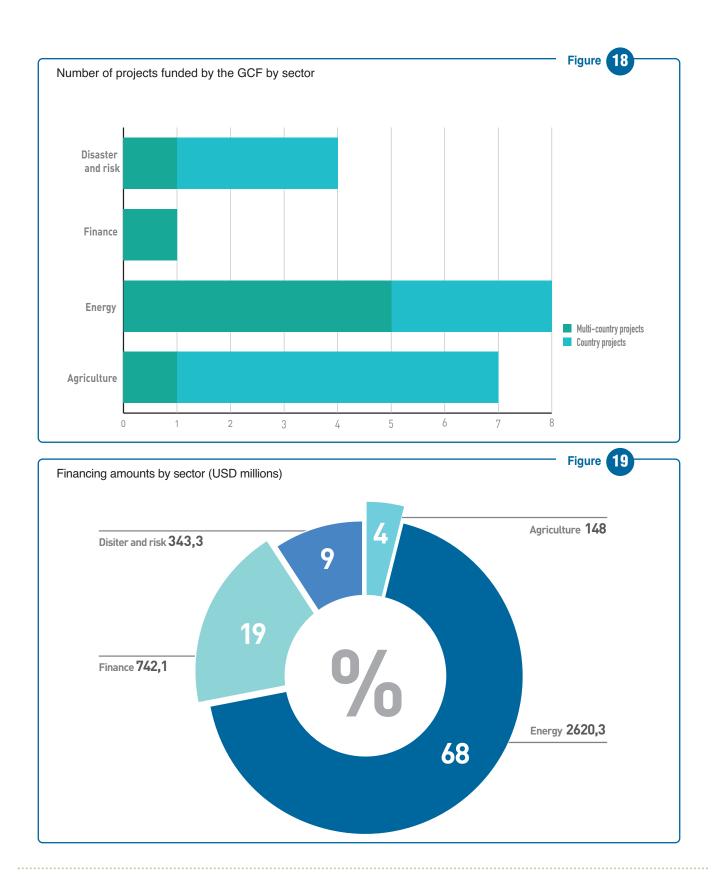

It should be noted that only about 20 per cent of this amount (\$792 million) went to national projects, with the remainder being absorbed by multi-country projects. It is difficult to analyse multi-country flows from a national or regional perspective, as budgets are often not broken down by country and these projects cover countries, several of which are located outside the region.

In number, energy (8 projects) and agriculture (7 projects) are the main sectors financed, together accounting for three quarters of the projects approved (Figure 18) in the ECOWAS-CILSS zone.

In volume terms, however, the energy sector alone accounted for more than two thirds of the financing, but only 8 ECOWAS-CILSS countries benefited from it, along with 36 others around the world: the large volume of resources mobilised (2.6 billion dollars) must be considered with caution, as the share actually invested in the zone is not easy to estimate. It is followed by the finance sector with almost a fifth of the funding (with a single project), destined for 17 countries, i.e. 5 in the ECOWAS-CILSS zone. The agricultural sector comes in third place with less than 4% of approved financing (Figure 19), but with 6 of the 7 beneficiary countries located in the ECOWAS-CILSS zone.

More than two thirds of the approved funding went to mitigation activities, just over 6% to adaptation projects, and the remaining quarter to cross-cutting projects (Figure 20).

Slightly more than 95% of these resources were mobilized through multilateral agencies, 4,6% through regional agencies, and less than 1% through national entities (Figure 21).

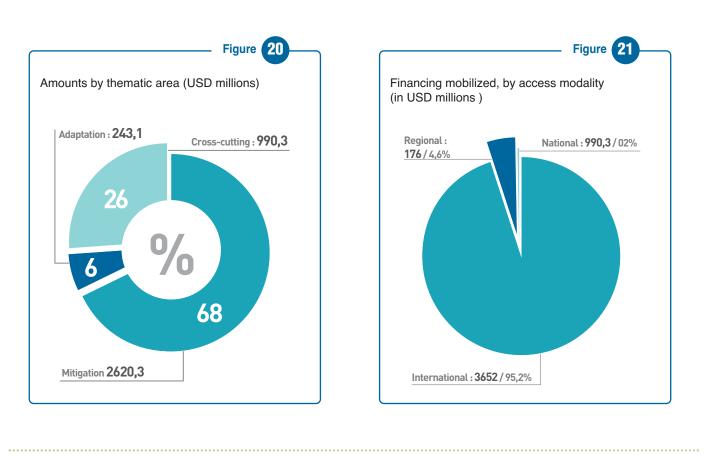

This reality could evolve in the coming years, given the increase in the number of direct access entities with the recent accreditation of the FNEC of Benin, the ongoing candidature of the Agricultural Bank (BA) of Senegal, but also the announced candidatures of the ECOWAS Bank for Investment and Development (EBID) and the CILSS.et du CILSS.

The significant resources available through the GCF Readiness Program are expected to decisively strengthen the institutional and technical capacities of direct access entities. ECOWAS-CILSS countries received \$27.2 million readiness and preparatory support grants from the Green Climate Fund. However, the general configuration will remain the same for a long time, due to the size and experience of the multilateral entities which are reflected in their categories of accreditation, particularly in terms of project size and financial instruments.

4.4.3. Cofinancement et instruments financiers

The financial capacities of these multilateral institutions, their experience and the networks of partnerships built up over time explain their performance in terms of co-financing. In fact, more than 70% of the resources they have mobilized are in the form of co-financing, compared to 44% for regional entities and only 7% for national entities (Figure 22).

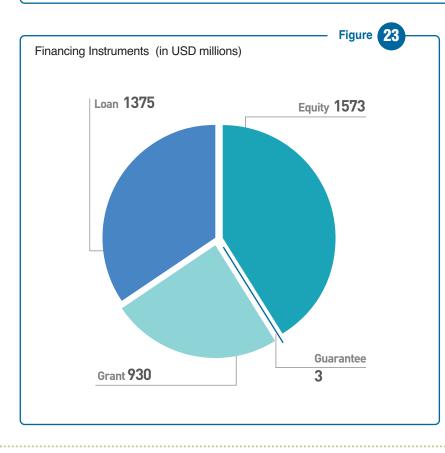

Analysis of the various financial instruments used reveals that equity financing has been the most used so far. This type of financing represents slightly more than 41% of financing, against 34% in the form of loans and 24% in grant form (Figure 23).

MULTILATERAL FINANCIAL FLOWS TO WEST AFRICA

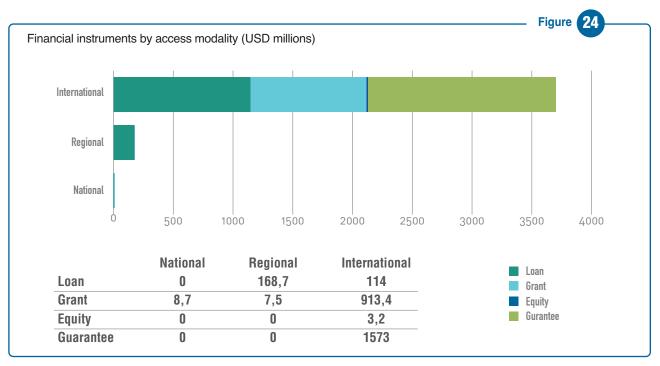

The guarantee is not yet widely used as an instrument in the region (less than 1%), despite its great relevance for a sector like agriculture, in particular as a derisking instrument. In fact, the three main barriers preventing financial service providers from lending to farmers and SMEs are: (i) inappropriate enabling environment (political and regulatory frameworks); (ii) exposure to specific agricultural risks; and (iii) high transaction costs (Sadler et al., 2016).

Multilateral entities operate with all of the GCF's financial instruments²⁰, with equity financing remaining predominant, followed by concessional lending. Regional direct access entities have so far operated with loans (around 96%) and grants. National direct access entities have so far only operated with the grant instrument (Figure 24).

This is explained, in part, by the fact that most of the national entities operational to date are entities with an environmental background in the broad sense. However, there are more and more national entities with a financial background that are embarking on the accreditation process. This is the case of the Banque Agricole (BA) of Senegal which is in phase 2 of the accreditation process. Through these entities, the countries of the region should be able to make better use of other financial instruments and mobilize larger volumes of financing through the national entities. Direct access in general and national direct access in particular are major innovations in the climate finance landscape. They offer countries the opportunity to take greater ownership of the implementation and funding of their projects and programs. However, direct access should be seen as an additional mean for channeling resources, not as a modality that replaces international access. There are always areas in which international entities have added value that enables countries to mobilize more and even faster the resources they need to finance their climate-sensitive development priorities.

The analysis of donor financing shows that the most common instruments used so far for GCF financing on own resources are concessional loans (39%), followed by grants (31%). For the co-financing part, the most used instrument is equity (46%), followed by concessional loans with 32% (Figure 25). This illustrates the principle of mixed financing.

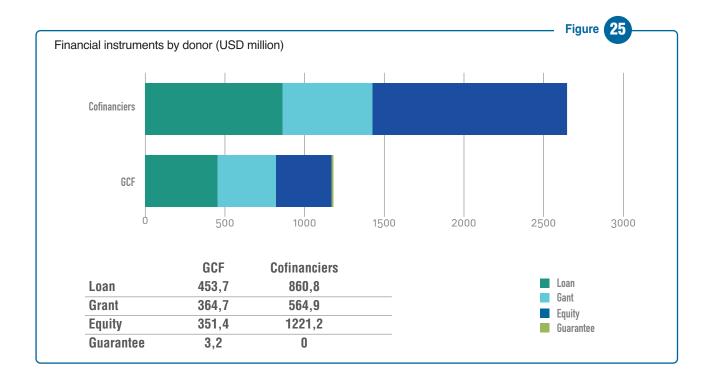

With the GCF's mandate to promote climate-sensitive development for developing countries, special attention should be paid to this predominance of the loan instrument at the expense of grants.

GCCA

²⁰ Concessional loans, grant, guarantee and equity

4.5. PORTFOLIO OF THE ADAPTATION FUND IN THE ECOWAS-CILSS ZONE

The Adaptation Fund (AF) was established in 2001 by virtue of the Kyoto Protocol, under the United Nations Framework Convention on Climate Change (Decision 10 / CP.7). It was operationalized as a sequel to the Decisions taken at COP 13 in December 2007 in Bali (Indonesia). In 2008, the Board proposed the strategic priorities, policies and guidelines for the Adaptation Fund (decision B.3 / 7), which were then approved by the Parties at CMP4 (Decision 1 / CMP.4), indicating that the main objective of the Fund is to "... provide international funding to help developing countries undertake concrete adaptation projects / programs in accordance with their development needs, objectives and strategies" (AF, 2018). Like the GCF and the GEF, the AF serves as a financial mechanism for the United Nations Framework Convention on Climate Change (UNFCCC) and also serves the Paris Agreement. As of 11 November 2019, the total amount of contributions²¹ to the Adaptation Fund amounted to US \$ 875.15 million.

Since 2010, the FA has committed US \$ 720 million for climate adaptation and resilience activities, in particular by supporting 100 concrete adaptation projects and 36 South-South cooperation and institutional support programs.

The Fund is financed by a share of 2% of the product of certified reductions in GHG emissions (CER), emitted within the framework of Clean Development Mechanism (CDM) projects and in part by government and private donors.

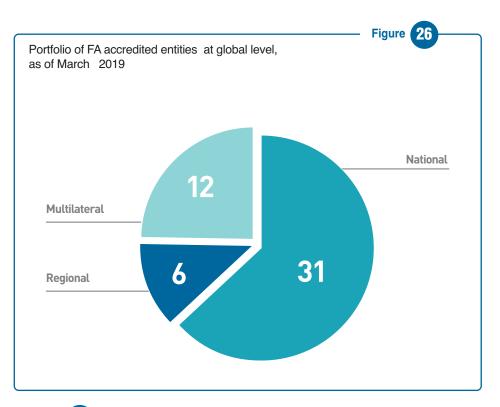

The resources of the AF are accessible through implementing entities which

must be accredited. The AF has introduced one of the most important innovations in the climate finance landscape. namely direct access. Countries can therefore access resources through a national or regional entity (direct access), but also through multilateral entities (international access). As of March 2019, there were 47 implementing entities including 12 multilateral entities (MIEs), 29 national entities (NIEs) and 6 regional entities (RIEs). Entities applying for accreditation with the AF must be nominated by the Designated Authorities of this Fund. The list of these AF Designated Authorities in the ECOWAS-CILSS zone is in presented in Annex 2.

Similarly to the GCF, direct access has finished imposing itself as a reality in the climate finance landscape, representing almost two thirds of the AF implementing entities (Figure 26).

MULTILATERAL FINANCIAL FLOWS TO WEST AFRICA

Table

Тодо	Banque Ouest Africaine de Développement (BOAD)	Direct Regional
Tanzania	National Environment Management Council (NEMC)	Direct National
Tunisia	Observatoire du Sahara et du Sahel OSS)	Direct Regional

Of the 37 entities with direct and regional access to the AF, 13 are located in Africa and 4 in the ECOWAS-CILSS zone (Table 3) :

- Three entities with national direct access: the Centre de Suivi Ecologique (CSE) of Dakar, the Banque Agricole of Niger (BAGRI), the Fonds National pour l'Environnement of Benin (FNEC) ; and
- One entity with regional access : the West African Development Bank (BOAD), based in Togo.

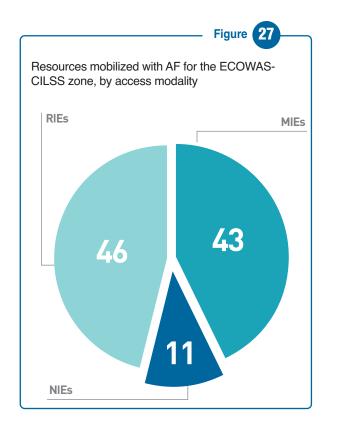

The list of AF accredited entities operating in the ECOWAS-CILSS is shown in Annex 4. The AF portfolio in Africa is composed of 34 projects, 22 Readiness grant and 1 scale-up grant, totalling USD 283 964 200.

The flow of resources from the AF to the ECOWAS-CILSS zone now extends to US \$ 98.3 million, or almost 35% of AF flows to Africa. More than half of these resources (57%) were mobilized through direct access (11%) or regional (46%) entities (Figure 27). The ECOWAS-CILSS zone is thus distinguished from the situation at the Africa region taken globally, and at the global level with respectively 54% and 57% of resources mobilized by the multilateral entities.

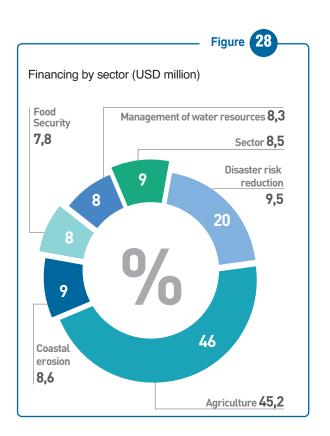

This indicates the performance of the regional entity (BOAD) which mobilized a little over 46% of resources, but also that of the national entity of Senegal (CSE) which mobilized all the amount available for the country and is very active on the AF Readiness program.

The agricultural sector received the most funding (46%), followed by disaster risk reduction (20%), (Figure 28).

South-South cooperation is very dynamic in the Region, with dynamic and continuous exchanges between direct access entities. To date, 10²² out of the 17 countries of the ECOWAS-CILSS zone have benefited from the resources of the AF Readiness Program to the cumulative amount of US \$ 482,694, for capacity-building activities of national and regional institutions to prepare accreditation and then receive and manage funding for climate action.

²² Benin, Cabo Verde, Côte d'Ivoire, Guinea, Mali, Niger, Sierra Leone, Senegal, Chad, Togo

CONCLUSIONS AND RECOMMENDATIONS

From 2003 to 2019, the countries of the ECOWAS-CILSS zone mobilized US \$ 1,377 million from multilateral climate funds, mostly for adaptation actions and with the LDCF as the main donor, followed by the GEF through its various replenishments (GEF 1 to 6).

The MDBs also make a very significant contribution to financing climate action in these countries. In fact, in 2018 alone, these countries benefited from commitments to the tune of US \$ 2,493 million from the MDBs²³, i.e. around 6% of all the funding from the MDBs and 28% of the funding which went to sub-Saharan Africa.

Financial resources for climate action are therefore available and increasing. The ECOWAS-CILSS zone is among the best in Africa in terms of mobilizing funding. However, there are great disparities between countries in the Region and there is a need to better target capacity building actions, but also to further support South-South cooperation actions. Capacity building initiatives abound throughout the region, with measurable impacts and benefits not always commensurate with the investments. These actions should be complemented by longer-term mentoring to allow time to translate progress in terms of capacity into concrete achievements

Furthermore, the resources mobilized remain far below the needs expressed by the countries, particularly in view of the commitments made through the Paris Agreement. For the resources available at the international level, mobilization capacities constitute a major challenge for the region, while domestic financing is still very modest, in spite of the initiatives developed here and there, in particular with the establishment of national climate funds. At the regional level, ECOWAS recently launched a mixed financing mechanism, aimed at promoting climate-smart agriculture and resilient supply chains in the 15 countries of West Africa, by providing technical assistance grants and subsidized rate loans, guarantees and equity financing for smallholder organizations and agricultural enterprises. It is the West African Initiative for Climate Smart Agriculture (WAICSA) which received endorsement in September 2019 from the Global Innovation Lab for Climate Finance. The participation of donors, public and especially private, will be decisive for the success of this initiative.

The GCF and the AF generate great enthusiasm, often tempered by the complexity (perceived or real) and the length of their procedures. The region has so far been able to mobilize \$ 3.8 billion of investments through projects approved by the GCF (of which 1/3 financed directly by the Fund, the other 2 thirds being mobilized by other donors, national budgets or private investment) and about \$ 98 million from the AF. With these two mechanisms, direct access has become established as a good practice in the climate finance landscape. In fact, 5% of the resources mobilized from the GCF are mobilized through direct access entities, around 54% for the resources mobilized with the AF. However, particularly with regard to GCF, the vast majority of flows are multi-country projects, often with a majority of countries outside the region, making it difficult to analyse them from a country or regional perspective. Beyond that, the NDAs seem to have less control and mastery over multi-country projects (especially global projects), especially in implementation. There is a need to rethink the funding strategy for this type of project, giving priority to regional (or even subregional) projects, covering countries sharing similar realities and challenges, and ensuring a clear and transparent distribution of resources.

In the GCF portfolio in the region, the most funded sectors are agriculture and energy, when considering the number of projects. However, when considering volumes, two thirds of the funding went to energy and mitigation: the thematic balance between adaptation and mitigation is therefore not yet achieved in the region.

Beyond the issue of mobilization, it would be appropriate to analyze the relevance of the projects, the extent to which they meet national needs and priorities and are aligned with country programs and INDCs / NDCs. The use of these resources also deserves to be better monitored, in particular through the implementation of more formal and more inclusive accountability frameworks.

In the agricultural sector, which still employs the vast majority of populations, risk mitigation instruments have yet to be fully exploited, particularly with GCF funding. Also, the countries of the ECO-WAS-CILSS region would do well to prepare for future actions and flows linked to WIM²⁴, in particular towards insurance companies.

²³ Bénin, Cap-Vert, Côte d'Ivoire, Guinée, Mali, Niger, Sierra Léone, Sénégal, Tchad, Togo

²⁴ Own resources and external resources channeld through them

ANNEXS

ANNEX 1 : LIST OF COUNTRY PROJECTS FINANCED BY MULTILATERAL MECHANISMS IN THE ECOWAS-CILSS ZONE COUNTRIES (UNTIL FEBRUARY 2019)

Country	Project title	Fund	Theme / Objective (mitigation, REDD+, adaptation, multiple-CFU Categories)	Amount of Funding Approved (USD millions)	Disbursed (USD millions)
Bénin	Projet d'Appui au Développement du Maraîchage au Benin (PADMAR)	ASAP	Adaptation	4,5	0,4
Bénin	Adaptation of Cotonou Lagoon ecosystems and human communities to sea level rise and extreme weather events impacts (project formulation grant)	AF	Adaptation	0	0
Bénin	Technical Assistance Grant for ESP (Readiness support package)	AF	Adaptation	0	0
Bénin	Adaptation to climate change in Benin - Providing a reliable base mapping and fighting floods by preserving and developing gallery forests	GCCA	Adaptation	9	2,9
Bénin	Flood Control and Climate Resilience of Agriculture Infrastructures in Oueme Valley- Benin	LDCF	Adaptation	7,2	7,2
Bénin	Integrated Adaptation Programme to Combat the Effects of Climate Change on Agricultural Production and Food Security	LDCF	Adaptation	3,1	3,2
Bénin	Project for the Elaboration of the National Programme of Action for Adaptation for Climate Change (NAPA)	LDCF	Adaptation	0,2	0,2
Bénin	Strengthening Climate Information and Early Warning Systems in Western and Central Africa for Climate Resilient Development and Adaptation to Climate Change - Benin	LDCF	Adaptation	4	4
Bénin	Strengthening the Resilience of Rural Livelihoods and Sub-national Government System to Climate Risks and Variability in Benin	LDCF	Adaptation	4,5	
Bénin	SPWA-CC: Benin Energy Efficiency Program	GEF4	Mitigation - General	1,8	1,8
Bénin	Promotion of Sustainable Biomass-based Electricity Generation in Benin	GEF5	Mitigation - General	3,9	
Bénin	Improving Mobility in Parakou	GEF6	Mitigation - General	1,8	1,8
Bénin	Sustainable Forest Management and Conservation Project in Central and South Benin	GEF6	Mitigation - REDD	2,6	
Bénin	Preparation of Benin's First Biennial Update Report (BUR1) to UNFCCC	GEF5	Multiple Foci	0,4	0,4
Bénin	Readiness program support	GCF	Multiple foci	0,2	
Bénin	Strengthening the Resilience of the Energy Sector in Benin to the Impacts of Climate Change	LDCF	Multiple foci	8	
Burkina Faso	Integrated and Sustainable Management of PONASI Protected Area Landscape	GEF6	Adaptation	5,3	
Burkina Faso	(FP074) Africa Hydromet Program - Strengthening Climate Resilience in Sub Saharan Africa: Burkina Faso Country Project	GCF	Adaptation	22,5	
Burkina Faso	Adapting Natural Resource Dependent Livelihoods to Climate induced Risks in Selected Landscaqpes in Burkina Faso: the Boucle du Mouhoun Forest Corridor and the Mare d'Oursi Wetlands Basin	LDCF	Adaptation	7	7,1
Burkina Faso	Climate Resilience in the Nakambe Basin	LDCF	Adaptation	8,8	
Burkina Faso	Integrating Climate Resilience into Agricultural and Pastoral Production for Food Security in Vulnerable Rural Areas Through the Farmers Field School Approach.	LDCF	Adaptation	3,8	3,8
Burkina Faso	National Adaptation Program of Action	LDCF	Adaptation	0,2	0,2
Burkina Faso	Promoting Index-based Weather Insurance for Small Holder Farmers in Burkina Faso	LDCF	Adaptation	4,5	0,2
Burkina Faso	Strengthening Adaptation Capacities and Reducing the Vulnerability to Climate Change in Burkina Faso	LDCF	Adaptation	2,9	3

Country	Project title	Fund	Theme / Objective (mitigation, REDD+, adaptation, multiple-CFU Categories)	Amount of Funding Approved (USD millions)	Disbursed (USD millions)
Burkina Faso	Strengthening Climate Information and Early Warning Systems in Western and Central Africa for Climate Resilient Development and Adaptation to Climate Change - Burkina Faso	LDCF	Adaptation	4	4
Burkina Faso	Promoting Energy Efficiency Technologies in Beer Brewing Sector in Burkina Faso (Project Preparation Grant)	GEF4	Mitigation - General	0,4	0,4
Burkina Faso	SPWA-CC Promotion of Jatropha Curcas as a resource of Bioenergy in Burkina-Faso	GEF4	Mitigation - General	1,3	1,3
Burkina Faso	SPWA-CC: Ouagadougou Transport Modal Shift	GEF4	Mitigation - General	0,9	0,9
Burkina Faso	(FP093) Yeleen Rural Electrification Project in Burkina Faso	GCF	Mitigation - General	27,7	
Burkina Faso	Readiness Fund Grant	FCPF-RF	Mitigation - REDD	6,9	2
Burkina Faso	Readiness preparation grant	FCPF-RF	Mitigation - REDD	3,8	0,5
Burkina Faso	Climate change mitigation and poverty reduction through the development of the cashew sector in Burkina FasoPart of: Private Sector Set-Asides	FIP	Mitigation - REDD	4	0,1
Burkina Faso	Decentralized Forest and Woodland Management	FIP	Mitigation - REDD	16,5	2,3
Burkina Faso	Dedicated Grant Mechanism for Indigenous Peoples and Local Communities	FIP	Mitigation - REDD	4,5	1,9
Burkina Faso	Gazetted Forests Participatory Management Project for REDD+ (PGFC/REDD+)	FIP	Mitigation - REDD	11,5	4,6
Burkina Faso	Climate governance and sustainable decentralised forest management in Burkina Faso	GCCA	Mitigation - REDD	9	4,5
Cap-Vert	Rural Socio-Economic Opportunities Programme	ASAP	Adaptation	4	0
Cap-Vert	South-South Cooperation Grant (Readiness support package)	AF	Adaptation	0,1	0,1
Cap-Vert	Sustainable Energy Access to Manage Water Resources: Addressing the Energy-water Nexus	GEF6	Adaptation	1,8	
Cap-Vert	Building Adaptive Capacity and Resilience to Climate Change in the Water Sector in Cape Verde	LDCF	Adaptation	3	3,1
Cap-Vert	Preparation of a National Adaptation Programme of Action	LDCF	Adaptation	0,2	0,2
Cap-Vert	SPWA-CC Promoting market-based development of small to medium scale renewable energy systems in Cape Verde.	GEF4	Mitigation - General	1,7	1,7
Cap-Vert	Cape Verde Appliances Building Energy-Efficiency Project (CABEEP)	GEF5	Mitigation - General	1,9	1,9
Cap-Vert	Building adaptive capacity and resilience of the forestry sector in Cape Verde	GCCA	Multiple foci	6,3	
Tchad	Projet d'amélioration de la résilience des systèmes agricoles au Tchad (PARSAT)	ASAP	Adaptation	5	1,1
Tchad	South-South Cooperation Grant (Readiness support package)	AF	Adaptation	0,1	0,1
Tchad	Tchad National Adaptation Plan	LDCF	Adaptation	11,6	
Tchad	Community-based Climate Risks Management in Tchad	LDCF	Adaptation	5,3	
Tchad	Enhancing the Resilience of the Agricultural Ecosystems	LDCF	Adaptation	7,3	7,3
Tchad	Préparation du Programme d'Action National pour l'Adaptation aux Changements Climatiquesn (NAPA)	LDCF	Adaptation	0,2	0,2
Tchad	Strengthening agro-ecosystems' adaptive capacity to climate change in the Lake Tchad Basin (Lac, Kanem, Bahr El Ghazal, and part of the Hadjer-Lamis region)	LDCF	Adaptation	4,1	
Tchad	Strengthening Agro-ecosystems' Adaptive Capacity to Climate Change in the Lake Chad Basin (Lac, Kanem, Bahr El Ghazal, and Part of the Hadjer-Lamis Region)	LDCF	Adaptation	4,1	
Tchad	SPWA-CC Promoting renewable energy based mini-grids for rural electrification and productive uses	GEF4	Mitigation - General	1,8	1,8

Country	Project title	Fund	Theme / Objective (mitigation, REDD+, adaptation, multiple-CFU Categories)	Amount of Funding Approved (USD millions)	Disbursed (USD millions)
Tchad	Promoting Energy Efficient Cook Stoves in Micro and Small-scale Food Processing Industries	GEF5	Mitigation - General	0,7	0,7
Tchad	Alliance Mondiale contre le Changement Climatique AMCC au Tchad - Adaptation aux effets du changement climatique et développement des énergies renouvelables	GCCA	Multiple foci	9	0,8
Tchad	Restoring Ecological Corridors in Western Chad for Multiple Land and Forests Benefits - RECONNECT	GEF6	Multiple Foci	5,4	
Côte d'Ivoire	West&North West Regions Agricultural Production & Marketing Support Project (PROPACOM)	ASAP	Adaptation	7	0,7
Côte d'Ivoire	South-South Cooperation Grant (Readiness support package)	AF	Adaptation	0,1	0,1
Côte d'Ivoire	SPWA-CC Promoting Renewable Energy-based Grids in Rural Communities for Productive Uses (Project Preparation Grant)	GEF4	Mitigation - General	0,9	0,9
Côte d'Ivoire	SPWA-CC Promotion of Energy Efficiency Lighting in Public, Commercial and Residential Buildings (under West Africa Energy Program: 3789)	GEF4	Mitigation - General	0,9	0,9
Côte d'Ivoire	Sustainable Industrial Production in the Cassava and other Agro-food Sectors through the Use of Renewable Energy Applications and Low-carbon Technologies	GEF6	Mitigation - General	0,9

COUNTRY PROFILES : THE GAMBIA

Economy and population

GDP per capita in 2018¹: USD 716.1 Population in 2018²: 2.3 million inhabitants HDI in 2018³: 0.466, ranking The Gambia 174th in the world, in the group of countries with low human development

Vulnerability

Vulnerability level ranking according to the ND-GAIN 2017 index: -141st out of 181 globally, making it the 41st most vulnerable country in the world

-141st out of 181 globally, making it the 41st most vulnerable country in the world

Access to multilateral climate funds

Amount of funding approved by **multilateral development funds** (from 2003 to 2019): US\$ 66.1 million, placing the country in 9th place among beneficiary countries, out of the 17 in the ECOWAS-CILSS area.

Amount of funding approved by the **MDBs** from 2015 to 2018: US\$ 67 million, placing The Gambia in 11^{th} place, out of the 17 countries in the ECOWAS-CILSS area.

Portfolio with GCF in 2019	
Number of country projects approved (FPs & SAPs*)	1
Number of multi-country projects approved (FPs & SAPs)	0
Total amount approved on GCF resources (USD million)	20,5
Total project value (USD million)	25,5
Sectors	A1-Most vulnerable people and communities A2-Health and well-being, and food and water security A4- Ecosystems and Ecosystem services
